EDUCATION

Visvesvaraya Technological University
K.S. School of Engineering and Management

Bangalore, India

Bachelor of Engineering in Computer science and Business Systems

2022 – 2026

- GPA : 7.5/10
- Relevant coursework in Web Development , App Development.

SKILLS

Technical: MERN Stack, SQL, JavaScript, Python, Java, Html, CSS, Flask, Django

Tools: Git, GitHub, VS Code, Postman.

WORK EXPERIENCE

Full Stack Developer Intern | PygenicArc | August 2025 – Present

Currently serving as a Full Stack Intern at PygenicArc, working with React for the frontend and Django for the backend.

PROJECTS

Face Recognition & Intruder Detection System

- Built a real-time face recognition and monitoring system using OpenCV and the LBPH Face Recognizer for identifying authorize individuals.
- Used Haar Cascade Classifier for rapid and accurate face detection in varying lighting and background conditions.
- Integrated real-time webcam processing to enable continuous surveillance and immediate detection.
- Designed an intruder detection mechanism that captures, logs, and stores images of unauthorized individuals.
- System is capable of dynamically updating its face dataset, enhancing adaptability and improving long-term security monitoring in offices or restricted areas.

Bengaluru Civic Connect(Urban Eye)

- Developed a web-based civic issue reporting platform using ReactJS for the frontend and NodeJS for the backend.
- Integrated Google Maps API to allow users to precisely tag issue locations such as potholes, garbage dumps, and water leakage.
- Implemented an admin dashboard for verifying, moderating, and resolving reported civic complaints.
- Designed a user-friendly interface enabling real-time submission and tracking of public infrastructure issues.

Automated Blood Bank Management System

- Developed a web-based blood bank management system using HTML, CSS, and JavaScript to streamline donor and recipient data handling.
- Designed intuitive user interfaces for hospitals, blood donors, and administrators to manage blood availability, donation records, and request approvals.
- Enabled search and filter functionalities for blood type, location, and availability to facilitate quicker matches during emergencies.
- Focused on improving accessibility, efficiency, and transparency in blood donation workflows.

Real-time Location Sharing Web App

- Developed a real-time location sharing platform using Node.js, Express, Socket.IO, and EJS templating engine.
- Integrated browser Geolocation APIs to capture and transmit user locations instantly over WebSockets.
- Enabled users to share their live coordinates securely with others through a unique session-based URL.
- Designed a responsive and lightweight UI for seamless experience across devices.
